

## Body Chart Tool System (BCT)

MaCaPS Body Charting Tool System records the skin, wound or drain conditions to enable easy keep track of the treatment and recovery time of the resident. It will

- allow early detection of changes in residents' conditions facilitated by instant availability of historical data during care process,
- use RFID for Identification and Verification to reduce human error,
- in-build with touch screen for hand drawing of wound patterns or locations,
- equip with camera for photo taking to enable on-the-spot care and continuous monitoring,
- sort by Photo Gallery for condition viewing,
- support review & print of historical data and wound report with photos.
